TITLE. The title should accurately, clearly, and concisely reflect the emphasis and content of the paper.

The title must be brief and grammatically correct.

AUTHOR NAMES. Include in the byline all those who have made substantial contributions to the work, even if the paper was actually written by only one person. Use first names, initials, and surnames (e.g., John R. Smith) or first initials, second names, and surnames (e.g., J. Robert Smith). Do not use only initials with surnames (e.g., J. R. Smith) because this causes indexing and retrieval difficulties and interferes with unique identification of an author. Do not include professional or official titles or academic degrees. At least one author must be designated with an asterisk as the author to whom correspondence should be addressed.

AUTHOR ADDRESS. The affiliation should be the institution where the work was conducted.

AUTHOR EMAIL ADDRESS

RECEIVED DATE (to be automatically inserted after your manuscript is accepted if required according to the journal that you are submitting your paper to)

ABSTRACT. All manuscripts must be accompanied by an abstract. The abstract should briefly state the problem or purpose of the research, indicate the theoretical or experimental plan used, summarize the principal findings, and point out major conclusions. The optimal length is one paragraph.
MANUSCRIPT TEXT. For full guidelines, please see the Guide, Notes, Notice, or Instructions for Authors that appear in each publication’s first issue of the year and on the World Wide Web at http://pubs.acs.org. This may include an introduction, experimental details (sections titled Experimental Methods, Experimental Section, or Materials and Methods), theoretical basis (sections titled Theoretical Basis or Theoretical Calculations), results, discussion, and conclusions.

ACKNOWLEDGMENT. Generally the last paragraph of the paper is the place to acknowledge people, organizations, and financing (you may state grant numbers and sponsors here). Avoid use of phrases like “we (I or the authors) would like to thank” and “we (I or the authors) wish to thank”, instead use “we (I or the authors) thank”. Follow the journal’s guidelines on what to include in the Acknowledgments section.

SUPPORTING INFORMATION PARAGRAPH. A brief statement in nonsentence format listing the contents of material placed here should be included at the end of the manuscript as a separate section titled Supporting Information Available. The contents of Supporting Information may include the following: (1) large tables, (2) extensive figures, (3) lengthy experimental procedures, (4) mathematical derivations, (5) analytical and spectral characterization data, (6) molecular modeling coordinates, (7) modeling programs, (8) crystallographic information files (CIF), (9) instrument and circuit diagrams, (10) and expanded discussions of peripheral findings. For complete instructions on how to prepare this material for publication, check the Guide, Notes, Notice, or Instructions for Authors that appear in each publication’s first issue of the year and on the World Wide Web at http://pubs.acs.org.

FIGURE CAPTIONS. Each figure must have a caption that includes the figure number and a brief description, preferably one or two sentences. The caption should immediately follow the figure with the format “Figure X. Figure caption.”. All figures must be mentioned in the text consecutively and numbered with Arabic numerals. The caption should be understandable without reference to the text. It is preferable to place the keys to symbols used in the figure in the caption, not in the artwork. Ensure
that the symbols and abbreviations in the caption agree with those in the figure itself and in the text and that the figure is already sized appropriately.

SCHEME TITLES. Chemical reactions and flow diagrams may be called schemes. Schemes may have brief titles describing their contents. The artwork for each scheme should immediately follow the scheme title. The title should follow the format “Scheme X. Scheme Title”. All schemes must be mentioned in the text consecutively and numbered with Arabic numerals. Schemes may also have footnotes, inserted after the artwork.

CHART TITLES. Lists of structures may be called charts. Charts may have brief titles describing their contents. The title should follow the format “Chart X. Chart Title”. Charts may also have footnotes. To insert the chart into the template, be sure it is already sized appropriately and paste it immediately after the chart title.

TABLES. Each table must have a brief (one phrase or sentence) title that describes its contents. The title should follow the format “Table X. Table Title”. The title should be understandable without reference to the text. Put details in footnotes, not in the title. Define nonstandard abbreviations in footnotes.

Use tables when the data cannot be presented clearly as narrative, when many precise numbers must be presented, or when more meaningful interrelationships can be conveyed by the tabular format. Tables should supplement, not duplicate, text and figures. Tables should be simple and concise. It is preferable to use the Table Tool in your word-processing package, placing one entry per cell, to generate tables.

REFERENCES. In many journals, references are placed at the end of the article, while in others they are treated as footnotes. In any case, place your list of references at the end of the manuscript. The appropriate placement will be made as part of the editorial process. Please use the appropriate style for the journal for which you are submitting your manuscript. Authors are responsible for the accuracy and completeness of all references. Authors should check all parts of each reference listing against the
